

Scan the card. Know the company. Close the deal.

KaunTech turns a two-second camera scan into a complete sales lead: a clean contact, a researched company dossier, a first-meeting plan, and automatic follow-ups. **Paper card in, pipeline out.**

AI COMPANY INTEL

AI DEAL STRATEGY

AR BUSINESS CARDS

WORKS OFFLINE

Who is it for? Founders, sales teams and anyone who works a room: expos, conferences, showrooms, site visits. If people hand you cards, KaunTech turns them into deals instead of drawer clutter.

 App Store

 Google Play

— 01 • CAPTURE

Every card. Every format. About two seconds.

Open the app and it is already looking. The scanner finds the card, waits for a sharp frame and captures on its own. A simple red-amber-green frame tells you exactly when you are close.

Point-and-scan camera

Auto-captures the moment the card is sharp. No shutter hunting, no blurry retakes, and it reads the text **on the device itself**, so it is fast even on weak venue Wi-Fi.

Reads the whole card

Names, job titles, companies, multiple phones and emails, websites, full addresses, LinkedIn, even **GSTIN**. Parsed into the right fields automatically.

AI Fix

Crumpled card, fancy font, odd layout? One tap and AI cleans up whatever the camera misread.

QR & NFC cards too

Reads QR business cards (vCard and MeCard) and NFC digital cards with a tap. If a paper card also carries a QR, both get merged into one contact.

Precision crop

Busy table, two cards in frame? Crop to exactly what should be read before scanning.

Review before saving

A full-screen editor shows every parsed field after the scan, so a quick glance and one tap is all a save takes.

Works fully offline

No signal at the venue? Scans save locally and everything syncs on its own once you are back online.

Straight to your phonebook

Optionally saves every lead into the phone's native contacts as well, so numbers are there when they call.

— 02 • ORGANIZE

A sales pipeline, not a photo album.

Every scan lands in Leads, a working pipeline you can actually run a follow-up day from.

Hot, warm, cold

Set a temperature on every lead and filter the list in one tap, so the right people get called first.

Events

Create an event right at scan time ("Expo Day 1") and every card from that day files itself under it.

Search everything

One search bar across people, companies and events. The card from three months ago is two keystrokes away.

Quick Picks & owners

Tag which product the lead asked about and assign the lead to the teammate who will handle it.

Voice memos & notes

Record a voice note while the conversation is fresh ("wants pricing by Friday") and keep written notes on every contact.

Custom fields **ULTRA**

Track whatever your business needs on each lead. Your fields, your pipeline.

One-tap export

Export the whole pipeline, or any filtered slice, to a spreadsheet. Every column included: contact details, temperature, event, owner, notes, plus the AI columns like deal fit and estimated deal value.

— 03 • AI INTEL

Know the company before you finish your coffee.

Run a Deep Intel Scan on any saved lead and KaunTech researches the company and the person for you. What used to be an hour of googling comes back as one clean dossier.

Company dossier

Industry, founding year, founders, headquarters, headcount, revenue, funding stage, market position, business model and the competitive landscape. The full picture on one screen.

Latest news & moves

What changed at the company recently, and **why now** is the right moment to reach out. Walk in talking about this quarter, not their About page.

Decision power

How senior your contact really is, how much buying influence they carry, and the engagement angle that fits their role.

Growth & risk signals

Momentum, expansion hints and warning signs, so you know how hard to push and where to be careful.

Personalization hooks

Ice-breakers and openers written from real facts about them, not generic flattery.

Honest by design

Every section carries a confidence level and real sources. When public info is thin, it says "not enough info" instead of inventing an answer.

— 04 • AI STRATEGY

A first-meeting plan, not just data. **ULTRA**

Intel tells you who they are. Strategy tells you how to win them. One tap builds a complete plan for the deal, tuned to your business and theirs.

Deal verdict

An honest read on whether this deal makes sense **for both sides**, with a fit score. When it is a bad match, KaunTech says so and saves you the chase.

Pain points, synergies, red flags

What you can fix for them, where the two businesses click, and what could sour the deal.

Approach & discovery

The opening strategy plus sharp discovery questions that make the second meeting happen.

The real buyer

Who actually signs, and who else to bring into the room before the decision gets made.

Objections & competitor risk

The pushback you should expect with answers ready, and where a competitor could squeeze in.

Action plan to close

The closing technique that fits this deal and a concrete step-by-step plan to get to yes.

SCAN

Card captured,
lead saved

**INTEL**

Dossier researched
and sourced

**STRATEGY**

Meeting plan
built for you

**CLOSE**

Walk in the most
prepared person there

— 05 • YOUR CARD

Their card gets scanned. Yours gets remembered.

KaunTech is not just for collecting other people's details. It makes your own card impossible to forget.

AR business cards

Point a phone at your printed card and it **comes alive**: video, 3D and tappable buttons floating over the paper. The one card nobody throws away.

AR studio

Ready-made AR templates on Pro. On Ultra, a full studio: custom 3D, video, build from scratch. Your brand, in the room, in their hand.

Share by QR

A personal QR that hands over your full contact card. Use the auto-generated code, your own link, or put your company logo on the code itself.

More than one you

Extra name slots and vCards for different roles or businesses. Consultant by day, founder by night, one app.

— 06 • AUTOMATIONS

Scan once. It lands everywhere.

The follow-up is where deals die. KaunTech does it the moment you scan, even while you are still talking to the person.

Gmail follow-ups

Follow-up emails go out **from your own Gmail address**, in the background, using your templates with smart placeholders (name, company and more) filled per lead.

WhatsApp auto-message

Greet new leads on WhatsApp with your saved templates the moment they are scanned. First to follow up, every time.

Google Sheets sync

Every lead lands in your own Google Sheet automatically, in a clean, stable column layout the whole team can work from.

Telegram

Each scanned lead is saved straight into your Telegram chat, so it is on every device you own within seconds.

Webhooks

Pipe every lead into your CRM or internal tools as it is captured. Signed payloads with rotating secrets, carrying every field including the AI ones.

Offline outbox

No internet? Every email, message and sync is queued and fires automatically once you are back online. Nothing gets lost.

Message templates

Write your own follow-up templates for email and WhatsApp, per scenario, with tap-to-insert placeholders. Sound like yourself at scale.

SECOND 0

Card scanned,
lead in the pipeline

**SECONDS LATER**

Sheet row added,
Telegram pinged

**STILL TALKING**

Gmail follow-up and
WhatsApp greeting sent

**THEY WALK AWAY**

Your name is already
in their inbox

— 07 • TEAMS

One booth. Five scanners. A single pipeline.

Team access ULTRA

Multi-user group access: the whole team scans into one shared pipeline instead of five personal camera rolls.

Lead ownership

Assign every lead to a person on the spot, and filter by owner later. No more "who was talking to them?"

Cloud backup & sync

On paid plans, leads are backed up to the cloud and follow the account. New phone, same pipeline.

Shared systems

Sheets, webhooks and exports mean the pipeline flows into whatever your team already uses. No new CRM to learn.

— 08 • THE EVERYDAY DETAILS

Small things, done properly.

Dark mode first

Designed dark by default, easy on the eyes in a dim expo hall. Light mode is there too.

Guided tour

A step-by-step walkthrough on first run, replayable any time from settings.

Launch into the camera

Optionally open straight on Scan, ready to capture before the handshake ends.

Your data, your call

Delete your account from inside the app, with a 30-day window to change your mind.

Talk to us in-app

Report a bug or send feedback from settings. Real replies, and rewards for detailed feedback.

Always current

The app tells you when an update is live and takes you straight to the store.

Secure by default

Sign in with email, Google or Apple. Sessions live in the device's secure storage, and you can change your password right from settings.

— 09 • TOKENS & REWARDS

One simple currency for the AI.

AI features run on k-tokens (KT). Plans include a monthly allowance, and you can always see where every token went.

Monthly allowance

Pro and Ultra refill your token balance every month. Spend it on AI Fix, Intel, Strategy and AR cards.

Invite & earn

Share KaunTech with a friend and both of you earn bonus tokens when they join.

Full transaction history

Every token earned and spent, listed in the app. No mystery deductions, ever.

Grow it your way

Tokens also unlock permanent add-on slots whenever you need one more: extra vCards, name slots, message templates, AR cards, custom fields and quick picks. Pay for exactly what you use, nothing else.

— 10 • PICK YOUR SPEED

Free to start. Serious when you are.

Every plan starts with the same fast scanner. Upgrade when the follow-up work should start doing itself. New users can try Pro free for 7 days.

FREE

Free forever

- + **Full scanning experience:** camera OCR with auto-capture and precision crop
- + Complete lead pipeline: temperature, events, search, notes and voice memos
- + Your own QR card to share back
- + Save leads to your phonebook
